

Keystone Starter Help Guide

Keystone Starter is a Core-only Go + SQL Server web application foundation.

Day-one flow:

1. Apply database migrations with `tools/apply-db.ps1` using Windows Authentication.
2. Copy `.env.example` to `.env` and adjust SQL Server settings if needed.
3. Run `go run .` and open `http://localhost:8080`.

Development login accounts:

`admin@example.com` / Keystone123!

`manager@example.com` / Keystone123!

`user@example.com` / Keystone123!

Core capabilities included:

- PASETO session cookies
- Argon2id password hashing
- Admin, Manager, and User route posture
- Users, roles, permissions, sites, tasks, announcements, reports, and audit
- SQL Server stored-procedure-only runtime data access

Module creation guidance lives in `keystone/codex/`.

Security note: seeded users and the example PASETO key are for local development only.
